

[Glutathione Study Finds Incredible Organ Detoxification Results](#)

April 29, 2009

A clinical study recently conducted on subjects wearing the Y-Age Glutathione patch showed remarkable measurable results in organ function. Principal investigator Dr. Sherry Blake-Greenberg found that within a month of use, the Glutathione patch significantly removed toxins from the body, producing improvement in all eight organs of the body studied.

Dr. Blake-Greenberg of Health Integration Therapy in Palos Verde Estates, CA, tested the patch on a sample size of 30 subjects. Over a period of four weeks, ten subjects wore the patch every day, while the other 20 wore the patch for five days a week. Both study groups experienced measurable improvements in organ function, although the first group who wore the patch daily achieved greater improvement in organ function.

For all the subjects, Dr. Blake-Greenberg tested eight digestive and endocrine system organs and glands before, during and after the study, evaluating the results using an Electro Interstitial Scanning (EIS) system. The EIS measures and interprets resistance to the flow of electric current through fluid between the body's cells. Dr. Greenberg found that after wearing the Glutathione patch, subjects achieved an impressive reduction in toxins in their organs.

Not only were the improvements measurable, but both groups achieved statistically significant results.

In the first group who wore the patch daily, all ten had highly significant improvements in all eight of the organs measured. In the second group who wore the patch for five days of the week, all 20 had significant improvements in four of the eight organs measured.

The results of the study are incredible! But, you're probably wondering, what exactly do these results mean? Quite simply, every person who wore the Glutathione patch experienced improvements in organ function.

These results are what you would expect from Glutathione, a potent antioxidant. According to Dr. Blake-Greenberg, "The patch boosts the antioxidant production at the cellular level, which increases cell energy to push out toxins from the organs."

"An increase in Glutathione creates an immediate response at the organ level," she explained. "The cells move toxins to the bloodstream, which are then drained through the lymphatic system. The cells work overtime to detoxify the body."

David Schmidt, LifeWave's founder and CEO, enthused about the study's results. "The results were strong enough that within this sample size we achieved statistical significance. This is just another way of saying the results of the study are scientifically acceptable," he stated.

"When you wear the Glutathione patch five days per week, during the first month of use, 50 percent of your body's organs will show an improvement in function," David stated. "This alone is fantastic!"

"But more remarkable is that the results of this study show that when you wear the Glutathione patch every single day, all organs in the body will improve!"

“This study reveals what we already know: we are being bombarded by toxins every day, and we need to protect our bodies from these toxins every day,” he explained.

Dr. Homer Nazeran of the University of Texas, El Paso is currently writing the results of the study as a scientific paper. We'll definitely keep you informed when the study results are officially published.

In the meantime, we're planning follow-up studies to demonstrate the results of wearing the Carnosine patch only, as well as studies to measure the effects of alternating the Glutathione patch with the Carnosine patch. So stay tuned for more!
